日時: 2023年 11月 3日(金) 11:00~12:00

場所: 22号館 1階 第2会議室

### Abstract

The Danish Academy of Technical Sciences (ATV) is launching a major new project on the possibilities and challenges of future healthcare. The project's background is that with an aging society and increasing healthcare costs we foresee a system- and financial collapse within the next decade. Thus, we start analysing the possibilities and barriers of changing a healthcare system focused on 'treatment and repair' to one focused on 'prevention and health' and using AI and robotics in healthcare with the objective to deliver more and better healthcare services at lower costs.
